

„KeyShieldSSO has become our main SSO solution“

Alléskolan is an upper secondary school in Sweden with approximately 2000 students and 350 employees. We wanted to simplify the authentication process for students and employees to our “Learning Management System” PingPong using SAML.

KeyShieldSSO has great LDAP support and tight integration for both eDirectory and Active Directory. A key feature is clients for Windows, Mac, Linux, iOS and Android.

The implementation went very well and the support has been great so KeyShieldSSO has become our main SSO solution when on Campus. More systems have been added since the start including OTRS, WordPress, IST Dexter, Micro Focus Filr and GroupWise.

We’re looking to add more systems in the future and also looking at new functionality like HW-tokens and 2 factor authentication.
