

## „KeyShieldSSO development are keen to embrace new integrations and functionality“

Coleg Sir Gar is a mixed Further and Higher Education college in South Wales, covering five campuses. We have approximately 10000 students and 780 staff.

We started using KeyShieldSSO in 2013 because it was a browser independent desktop SSO solution for Windows 7. We are now using the RADIUS features with our wifi solution to identify wifi users to our web filter. This method requires no client device application install or setting change.

We also use KeyShieldSSO to SSO to Moodle, Micro Focus Access Manager, Joomla, Micro Focus Filr, as well as our own bespoke php applications. We have a peak of about 7000 SSO requests each morning, and the system has performed faultlessly.

Installation and upgrades are very simple and the API is useful and easy to use. Documentation is great and the KeyShieldSSO development team are keen to embrace new integrations and functionality.
